10   ABSTRACT

          Methods and apparatus are provided for receiving a PDL File that describes
a print job, processing the PDL commands in the file, identifying print settings and
printer factors that may affect the entire print job, and reporting such print settings and
15   printer factors. Methods and apparatus are also provided for receiving a PDL File that
describes a print job, processing the PDL commands in the file, identifying any objects
in the print job that have associated predetermined attributes, and reporting the print
objects that have any such predetermined attributes.
